

An Australian-first opportunity for tourism businesses starting their emissions reduction journey

The Tourism Emissions Reduction program provides businesses with an emissions estimate and a tailored emissions reduction plan. Businesses can demonstrate their waste and emission reduction measures to visitors via a unique link and QR code.

Developed in partnership with ERC Australia, the Tourism Emissions Reduction program is a five-stage program that enables tourism businesses to develop an estimated carbon emissions report and an emissions reduction plan.

With more visitors seeking out sustainable and environmentally responsible tourism businesses, those making a commitment through this program will have another opportunity to distinguish themselves and reach new markets.

1. COMMIT Start by estimating your emissions

2. REDUCE Adjust operations to reduce emissions

3. AVOID Adopt renewables for purchased power

4. SUPPORT Sponsor emissions-reducing projects

5. SUSTAIN Sustain actions short and long term
